1. Write the equation given the roots x = 7 - 8i, x = 0 which passes through (2,178).

2. Write the equation of a parabola with roots of x = 3 and x = -2 which passes through (2, -8).

- a. Does this parabola open up or down? How do you know?
- 3. My dog and I are at the park and I throw the ball for my dog to fetch. The equation that models this situation is  $h(t) = -t^2 + 2t + 5.5$ , where "h(t)" represents the height in feet and "t" represents time in seconds.
  - a. What is the maximum height of the ball?
  - b. How long will it take the ball to hit the ground?
  - c. If my dog is 2 feet tall, at what time would my dog be able to catch the ball if it was in the correct location?

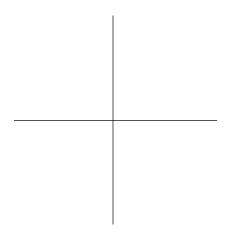

## 4. Use each diagram to answer the set of questions.

- 6. Find the zeroes.
  - a. By hand. Leave in simplified radical form.  $y = -x^2 + 4x 1$

b. Use your calculator  $y = -2x^3 + 5x^2 + 6x - 7$ 

- Sketch a polynomial with the following features:
  a. Negative L.C, Degree of 4, and 0 real roots
- b. Positive L.C., Degree of 6, I real double root

c. Negative L.C., Degree of 9, and 4 real roots
